

Technologies

Demo

List

Science reorganisation

Robotic manufacturing

Energetic manipulation

Metal smelting

Advanced processors

Accumulator manufacturing

Hybrid alloys

Optimised conductors

Field generation acceleration

High energy focalisation

Quantum kinetic simulations

Protective energy fields

Magnetic field concentrators

Resistant electronics

Optimised quantum transfer

Multifocal rays

Portable multifocal arrays

Quantum tunneling diagnostics

T-energy condensators

Vacuum explosives

Decentralised energy systems

Vacuum chambers

Self-repairing machines

Advanced mining

Nano-supporting structures

First alpha
